

Customs Declarations Management System (DMS)

Section 1 – General Introduction

Message Implementation Guidelines

MIG document version: 1.30

Structure of the documentation

- **Section 1 - General**

1. History
2. Message formatting
3. XML Guidelines
4. Introduction & Basic Principles for the WCO Data Model
5. Extensions on WCO Data Model version 3.11.0
6. DMS Introduction for processes

- **Section 2 – B2DMS**

1. Data model, Declaration and Additional Message
2. B2DMS XML Schema, with and without annotations

- **Section 3 – DMS2B**

1. Data model, Response
2. DMS2B XML Schema, with and without annotations

- **Section 4 - Appendices**

1. Rules and Conditions
2. Code Lists

- **Section 5 – User Manual**

- **Section 6 – Message Flows**

- **Section 7 – Lay-Outs**

- **Section 8 - Change Log**

Date	Version	Description
22-04-2021	1.00	Final version related to DMS 4
30-11-2021	1.10	Final version related to DMS 4.1
28-10-2022	1.20	Final version related to DMS 4.1

2 Message formatting

2.1 Message formatting - General

2.1.1 Usage Indicators

Usage Indicators are implementation-related indicators that further detail the use of “Conditional” Status Indicators. Usage Indicators are applied at all levels of the guidelines and shown adjacent to data items such as segment groups, segments, composite data elements and simple data elements. They dictate the agreed usage of the data items or entities. The Usage Indicators are:

Value	Description
R	Required Indicates the item must be transmitted in this implementation.
D	Dependent Indicates that the use of the item is depending on a well-defined condition or set of conditions. These conditions must be clearly specified in the relevant implementation guideline. The conditions and rules apply to all DMS messages. <ul style="list-style-type: none"> • In case a condition is applicable, it is always indicated by a 'D' in the hierarchic of the functional message. • In case a rule is applicable, it is indicated by a 'R', 'D' or 'O' in the hierarchic of the functional message.
O	Optional Indicates that this item is at the need or discretion of both trading partners. <u>Optional information must be completed if available</u>

2.1.2 Data value representation

Data value representation of the stand-alone data element or component data elements in the composite.

a	alphabetic characters
n	numeric characters
an	alphanumeric characters
a3	3 alphabetic characters, fixed length
n3	3 numeric characters, fixed length
an3	3 alphanumeric characters, fixed length
a..3	up to 3 alphabetic characters
n..3	up to 3 numeric characters
an..3	up to 3 alphanumeric characters
n..3,1	up to 3 numeric characters of which 1 position for a decimal

Concerning numerical fields, it should be noted that these are either a cardinal value (integer value), or a decimal value.

The decimal separator is the decimal point “.”. No other symbols are permitted as decimal separator.

Triad separators, such as a comma, shall not be used.

For decimal values, the decimal notation (with the decimal point) should only be used when there is a reason to indicate precision.

E.g., for a mass value:

- 89 kgm, with a precision of 1 kgm.
- 89.2 kgm, with a precision of 0.1 kgm.
- 89.20 kgm, with a precision of 0.01 kgm.

For numerical values, leading zeroes shall not be used. Trailing zeroes should only be used to indicate precision.

If the decimal point is present, at least one digit shall be present before the decimal point.

If the decimal point is present, at least one digit shall be present after the decimal point.

Examples for a n..11,3 type:

- 12345678.123 (Valid)
- 123456789.123 (Invalid - too many digits before decimal point and too many digits in total)
- 12345678.1234 (Invalid - too many digits after decimal point and too many digits in total)
- 0123 (Invalid - leading zero not permitted)
- +123 (Invalid - plus sign not allowed)
- 1,234 (Invalid - triad separator not allowed)
- .3 (Invalid - no digit before decimal point)

- 12345. (Invalid - no digit after decimal point)
- 0.3 (Valid)
- 1.3E1 (Invalid - only digits and decimal point allowed)
- 12345678901 (Valid - n..11,3 can have maximally 11 digits of which maximally 3 after decimal point)
- -0.33 (Valid - negative numbers are allowed)

To be noted is that the rules above also apply to numerical values within Code Lists. Values in such a list should always be stored without leading zeroes (in order to avoid problems of comparing e.g. a value of 60 against a value of 060). If the leading zeroes are indeed omitted, a comparison should always work out fine, regardless of the fact if the comparison was done on a numerical or character basis.

2.1.3 Date/Time Fields

The Date and/or Time fields consist of the date/time value and an format code.

Format code:	Value:	Format:	Example:
• 102	YYYYMMDD	n8	20200722
• 304	CCYYMMDDHHMMSSZZ	an15	20200722180733Z (UTC)
	Z	an17	20200722180733+02

2.1.4 Use of qualifiers and codes

For the codes to be used a distinction is made between international standard codes and national codes.

The international standard codes can be divided into:

- EDIFACT codes:
(<https://service.unece.org/trade/untddid/d20a/tred/tredi1.htm>)
- UN Recommendations:
(http://www.unece.org/cefact/recommendations/rec_index.html)
- EU specific codes:

The codes to be used are all indicated in tables published in the “Codeboek Douane, which has a legal status¹.

The code lists to be used are mentioned in Section 5 (User Manual) for each of the coded elements.

2.1.5 Message exchange

Message exchange between business and customs can take place in ZIP file format for certain messages.

Incoming

Individual messages must be bundled for supplementary declarations EIDR. A bundle of messages ensures that certain processing only needs to be performed once for the entire bundle. By compressing a bundle (“zipping”) even more messages can be placed in one bundle.

All other messages cannot be placed in ZIP file format.

Response

For the declarations in the incoming bundle all response messages that are directly applicable, will be sent in a bundle with response messages.

All response messages that are not directly applicable when the incoming bundle is received, will be sent separately (not bundled)."

2.1.5.1 Size (ZIP)

A ZIP file may contain a maximum number of 7,000 supplementary declarations while the size of ZIP file may not exceed 14 MB. The latter may lead to less than 7,000 declarations in the ZIP file.

2.1.5.2 Naming (ZIP)

The naming convention of the ZIP file is as follows:

<EORINUMBER>.<YEAR>.<ACTIVITY_TYPE><Z>.<SEQUENCE_NUMBER>.zip

¹ op grond van artikel 2:11 lid 2 Algemene douaneregeling

2.1.5.2.1 Data items

EORINUMBER	Economic Operators Registration and Identification number
YEAR	YY
ACTIVITY_TYPE	'05' for Declaration processing
Z	'z' or 'Z', parameter for ZIP file
SEQUENCE NUMBER	Unique sequence number within year

2.1.5.2.2 Data format for filename without extension

an..28

Examples:

nl001234567.20.05z.999888777.zip

nl001234567.20.05Z.000000000.zip

NL001234567.20.05z.999888777.zip

NL001234567.20.05Z.000000000.zip

..

3 XML Guidelines

The WCO XML Guidelines are available from the following link:

http://www.wcoomd.org/-/media/wco/public/global/pdf/topics/facilitation/instruments-and-tools/tools/data-model/wco_xml_guidelines_2012.pdf?la=en

4 Introduction & Basic Principles for the WCO Data Model

Information about the WCO Data Model is available from the following link:

<http://www.wcoomd.org/en/topics/facilitation/instrument-and-tools/tools/data-model.aspx>

The WCO Data Model App with WCO DM v3.11.0 is available from the link:

<https://datamodel.wcoomd.org/#/>

You have to sign-up for free before you can enter the App.

5 Extensions on WCO Data Model version 3.11.0

It was necessary to use extensions on version 3.11.0 of the WCO Data Model, they appear in the following table.
All of this extensions must result in Data Maintenance Request (change requests) for the WCO Data Model Projects Team and will be entered in higher versions of the WCO DM.

NL CDM Extension (compared to WCO DM 3.11.0) for DMS			(UCC) Change Details				Used in NL MIG		
UML Path	Attr. ID	Attribute Name	Type	Description	UCC Ref ID	DMR Number	DM S AM	DM S DEC	DM S RES
CIS/type	D013	Document name, coded	Change from an..3 into an..6			NL-2020-001_Document type	X	X	X
CIS/security	DMR	Security	Addition of attribute		11 07 000 000		X	X	X

6 DMS Introduction

DMS supports all customs declarations and notifications of the COMMISSION DELEGATED REGULATION (EU) 2015/2446² Annex B columns B1 to B4, C1, C2 for export procedures and the columns H1 to H6, I1 and I2 for import procedures.

The supported “Additional declaration types” in DMS are included in the code list for this data element which will be published on the website of Dutch Customs.

The business processes and the relevant messages are described in the message flows (section 6).

² Amended by: COMMISSION DELEGATED REGULATION (EU) 2021/234
